

Team Raptor
Sarah Cosgrove
Ramez Habib
Marek Malinowski
Alex Shub
Jackson Turner

Essential Program Components and Team Member Assignments:

UI: P: Sarah, B: Ramez
Synchronization - network and non P: Alex, B: Marek
DB (retrieval, input, structure) P: Marek , B: Sarah, B: Jackson
Middleware - local data mgmt (aggregation, management, verification):
P: Jackson, P: Ramez, B: Sarah, B: Marek, B: Alex

Security will be a concern to be addressed by each component group.

If there are any conflicts in opinion, they will be resolved by majority vote.

The modules will have the above general duty assignments, with dynamic programmer allocation as necessary to keep each component progress on track.

Our group has decided to plan the overall architecture of program and components together, and implement them in a more divided fashion.

For each component, each individual assigned the primary role will see to: documentation, modeling, and programming, with the backup holding the majority of testing and Q.A. analysis.

Communication:

Documents will be shared via Google Docs

Group members will attend a twice / week Hangout on G+ Mondays at 7pm, Saturdays at 6pm, and Thursdays after class. Spreadsheets to record minutes and attendance will be kept.

Sarah has been chosen as our manager and point point of contact for team Raptor. Questions will be directed through sarah to the manager, in the form of a weekly digest. Information will directed back to Scott through email if it could be useful to other groups.
